Charles found a spinner his teacher was making. He knew that if he put his problem-solving skills to use, he would be able to figure out the missing piece and finish the spinner for his teacher.

- Write an expression for the problem Charles needs to solve. Is there more than one way to do this?
- Find the solution.

See next page. \longrightarrow

$$\frac{3}{24} + \frac{6}{24} + \frac{9}{24} = \frac{18}{24}$$

$$\frac{14}{24} + \frac{9}{24} = \frac{23}{24}$$

$$\frac{1}{8} \cdot \frac{3}{3} = \frac{3}{24}$$

$$\frac{1}{3} = \frac{8}{24}$$

$$\frac{1}{4} \cdot \frac{6}{6} = \frac{6}{24}$$

$$\frac{1}{4} = \frac{6}{24}$$

$$? = \frac{1}{24}$$

$$\frac{14}{24} > \frac{14}{24}$$
