

Simplify the expression.

2/2

$$\underline{4} + \underline{x^2} + \underline{3x} + \underline{2x^2} + \underline{4}$$

$$3x^2 + 8 + 3x$$

Simplify the expression.

$$4(x + 5) - 3x + 7$$
$$\underline{4x} + \underline{20} - \underline{3x} + \underline{7}$$
$$x + 27$$

$$\begin{array}{r} x + 5 \\ x + 5 \\ x + 5 \\ x + 5 \\ \hline 4x + 20 \end{array}$$

/

Simplify the expression.

$$6y - 2(y - 7) + 3$$

$$6y + -2(y + -7) + 3$$

$$6y + -2y + 14 + 3$$

$$(4y + 17)$$

$$10n - 3(4 - 2n) + 8$$

$$10n + 3(4 + 2n) + 8$$

$$10n + 12 + 6n + 8$$

$$16n - 4$$
